Yes, I can provide the EPA's guidance documents on groundwater completion and could even answer some questions on the process. Attached are the documents. Sean you know where to find me if you need to find me and I would be happy answer questions that Eva or Alex may have on this subject. Rene' could also answer those questions too. I haven't take a site through this process yet but there are sites that could make it through this process in Region 10.

Alex, Sure thing!

Bernie, would you be able to share your latest presentation or paper on statistical methodology for determining when we're "done" relative to remedial goals? I know you've given several of these presentations on FHC in the region at at NARPM, etc. but I'll bet you've done more great things with the groundwater forum on this since. ODEQ has many plumes and PRPs that might benefit from using this type of standardized approach to gauge whether they are "done" on decades old plumes given the estuarine and seasonal variability that we're all used to on the Columbia and the Willamette.

Much appreciated.

Have a good weekend everyone.

Subject: references on protocols for detemining completion for groundwater treatment systems

Hi Sean.

At our meeting on Wed, you mentioned an EPA guy (maybe out of Vancouver, WA) who wrote some papers evaluating groundwater systems and how to make a good determination of when you're done. Could you send a reference? We'd like to check it out. Thanks.
